

Madison Rockwell

1. **file -b ./\* | sort | uniq -c**

2. What are all the attributes of a linux process?

3. **sudo useradd --create-home -d /home/newUser newUser**

The command above will create a user *newUser* with its home directory as */home/newUser*. The flag `--create-home` makes sure that the directory is created if it does not exist and the `-d` flag sets the directory as the home directory
